

DTS

DRIVER TRAINING SIMULATOR

The Driver Training Simulator (DTS) has three 55" wide aspect high resolution LED LCD monitors with a resolution of 1920 x 1080 with a 180-degree field of view and a motion base seat that makes you feel like you are in an actual vehicle. Drivers will be trained to recognize and anticipate hazardous driving conditions in both common, and difficult environments, handle environmental factors such as distracted driving, adverse weather, and practice collision avoidance. The DTS is designed to give you a driving experience which is specific to not only the type of vehicle you drive, but to the specific environment that you deal with every day.

The DTS is housed in a mobile trailer which is brought to your location, at no additional cost to members. Two participants are trained simultaneously in 60 minutes increments. The scenarios used will address the critical driving skills needed to be a safe driver. The DTS will help you become aware of and anticipate hazardous driving situations in both everyday and difficult driving environments.

Vehicle Types

- Ambulance
- Garbage Truck
- Pickup Truck
- SWAT Unit
- Snowplow
- Passenger
- Police
- Buses
- Fire
